Motion and Softex Partner to Bring Industry Leading Authentication Software Directly to Customers

OmniPass Enterprise Edition now available on all Motion Tablet PCs, providing an easy to deploy security solution for mobile workforces

AUSTIN, TX – Oct. 20, 2009 – Motion Computing®, a leading provider of integrated mobile computing solutions, today announced that it is now reselling **OmniPass Enterprise Edition**, an industry leading Enterprise Single Sign On (ESSO) and identity and access management (IAM) solution from **Softex Incorporated**. By directly reselling the security software, Motion can provide clients with a secure, scalable and cost effective solution optimized for use with its full line of tablet PCs.

“Motion and Softex have developed a unique partnership based on developing and delivering productivity and security solutions for a core set of target vertical markets,” said Vishal Jhaveri, vice president of marketing, Softex. “Now, by making the OmniPass Enterprise Edition available with its tablet PCs, Motion is enabling enterprise customers to quickly, easily and cost effectively deploy valuable security features across multiple users, devices and environments.”

The Client Edition of OmniPass, which has been integrated on all Motion tablets since 2004, has provided an out-of-the-box solution for single users to secure highly valuable data on personal devices. Now, with the Enterprise Edition, customers can have an integrated, server-based solution that offers enterprise-wide identity management; virtually eliminating passwords, securing access to enterprise resources through integrated file encryption and achieving regulatory compliance through integrated auditing and tracking.

Motion Tablet PCs, delivered across vertical markets, are ideal for highly mobile workforces. Rugged, lightweight and highly mobile with a variety of integrated wireless capabilities, the tablets enable users to access, gather and share valuable data while in the field. All Motion Tablets feature an integrated biometric fingerprint reader that enables user authentication and enhanced security through the simple swipe of a finger.

“Motion strives to develop partnerships with solution providers that extend the productivity benefits of highly mobile tablet PC solutions,” said Mike Stinson, vice president of marketing, Motion Computing. “By partnering with Softex to provide seamless access to industry-leading security solutions, we can help our enterprise customers confidently utilize and access data in the field.”

The OmniPass Enterprise Edition software is designed to provide network-wide security and “roaming fingerprints”, a feature that enables employees to move from device to device throughout the building while maintaining their network identity and access to information. Additionally, the solution eliminates insecure passwords, easily scales to meet large end user and device requirements, integrates into standard tools used by IT to manage user information and can be customized to work on almost any device.

Availability

The Softex OmniPass Enterprise Edition is available as an option on all Motion tablet PCs, which are available through Motion's network of value-added resellers and distributors worldwide.
