Motion and Sig-Tec Partner to Provide Mobility and Identity and Access Management Solutions to Healthcare Organizations

Companies introduce joint solutions that dramatically improve clinical workflows and patient experiences

Austin, TX – February 2, 2009 – Motion Computing®, a leader in mobile computing and wireless communications, and Sig-Tec®, a leader in identity and access management software solutions, announced today that they have created a partnership to deliver industry-leading solutions for mobility, information security and clinical workflow. The partnership comes after several joint client initiatives at major healthcare and academic organizations where the companies implemented solutions that improve workflows, free up resources and improve patient experiences.

Motion® and Sig-Tec jointly support their solution through Motion's Mobility Solutions group, a dedicated team that specializes in creating the best working environment by maximizing mobility, technology and software as they team with their clients to understand desired clinical workflow behavior and wireless network infrastructure needs and requirements. With the addition of Sig-Tec's identity and access management software, organizations have the ability to quickly address application management (single sign-on), identity management (strong authentication) and session management (fast user switching, hot desktop, single patient selection/context management) for ultimate workflows.

"Motion is pleased to be working with Sig-Tec, an industry leader in identity and access management software. Sig-Tec's software solutions can enhance the mobility offered by Motion tablet PCs by enabling users to more quickly access information while computing on-the-move," said Mike Stinson, vice president of marketing, Motion. "Sig-Tec's flexible, scalable solution is an ideal fit for healthcare customers that are looking for ways to make processes faster and easier for their organization and want to leverage the full mobility of tablet PCs with enhanced authentication capabilities."

An example of the solution is deployed at a major university healthcare organization. Of the many configuration options available, the solution establishes improvements to workflow including one-step biometric fingerprint authentication for clinicians to gain access to applications and patient records on Motion C5 mobile clinical assistants (MCAs). Clinicians need access to the MCAs and applications upwards of 100 times a day. Now, rather than manually typing a username and complex password each time, adding minutes to each interaction and detracting from overall patient care, the C5s with embedded fingerprint readers and Sig-Tec's AppStarter SSO solution allow the clinicians to significantly improve the speed, ease and accuracy of patient care.

Whether healthcare organizations are just beginning to investigate mobile solutions or are seeking to improve existing identity and access management processes, Sig-Tec and Motion have proven experience in delivering industry-leading solutions. The companies will work together to make the solutions available through Motion's network of distribution partners.

(more)

“Sig-Tec is pleased to be working with Motion, an industry leader in mobility healthcare solutions. We both have seen firsthand with our clients the many difficulties associated with meeting the necessary but often troubling healthcare requirements for privacy and security,” said John McGuire, national sales manager, Sig-Tec. “With our combined solutions we can improve the speed and performance of user workflows while addressing those requirements that usually have a negative impact on end-user experience.”

Based on proven market successes, Motion and Sig-Tec will initially focus on the healthcare industry, but intend to expand service availability across enterprises in vertical markets seeing to deploy mobility and identity and access management solutions.

About Sig-Tec

Sig-Tec is a software engineering company that has created a winning suite of Identity and Access Management solutions that raises the standard for performance in today's IdAM market. Sig-Tec's philosophy in building software solutions acknowledges every customer's expectations for a fundamental and reliable solution that is flexible, easy to implement, use and manage. Sig-Tec's identity and access management software has been carefully developed with extensive research with Chief Medical Officers, Chief Information Officers, Chief Security Officers, Directors of IT security, network administrators, security analysts and many industry experts. For additional information on Sig-Tec please visit www.sig-tec.com or email sales@sigtec.com.

About Motion Computing

Motion Computing is a mobile computing and wireless communications leader, combining world-class innovation and industry experience so professionals in vertical industries such as healthcare, field sales and service and government can use computing technology in new ways and places. The company's enhanced line of tablet PCs, mobile clinical assistants and accessories are designed to increase productivity for on-the-go users while providing portability, security, power and versatility. Motion combines those products with services and unique vertical market knowledge to deliver robust solutions – platforms, peripherals, services and wireless – customized for the needs of a particular industry.
