

Motion C5 Mobile Clinical Assistant

Benefits of Partnering with McKesson

- Joint development collaboration with Intel® and Motion Computing®
- Workflow designed for maximum clinician benefit
- Bundled software and services offering the lowest total cost of ownership
- Seamless application integration
- Customized scan engine capability
- Guaranteed timely delivery of fully functional solutions
- Increased clinician satisfaction and adoption rate due to device performance and reliability

In today's healthcare environment, clinicians are looking for ways to simplify workflow and improve efficiency. The Motion C5 Mobile Clinical Assistant (C5) is the answer. Designed specifically for the healthcare industry by Intel® and Motion Computing® in collaboration with McKesson, the C5 makes a clinician's job easier by offering mobility and reliability at the point of care. This healthcare grade device comes with an embedded bar-code scanner, high-speed wireless connectivity and a variety of functions, such as a digital camera, RFID capabilities and an optical character recognition engine all on a single device.

Validation and Integration

McKesson software applications have undergone extensive testing on the C5 to ensure proper functionality. This effort led to application enhancements specifically designed for the C5, which ensure effective bar-coding and connectivity to hospital wireless networks. Measures were also taken to ensure that multiple input methodologies were tested and ease of use was not diminished porting to this new device.

In fact, McKesson worked closely with The Medical University of South Carolina (MUSC) to test the C5 in a customer environment. "In our initial pilot of McKesson's clinical documentation and bar-code medication administration solutions with the C5, we saw an 18%

improvement in patient vital sign charting accuracy along with a significant reduction in charting delays," said Marilyn Schaffner, Ph.D., R.N., C.G.R.N, chief nursing officer at MUSC.

A Winning Partnership

Designed to handle the rigorous demands of the healthcare environment, the durable C5 helps clinicians implement existing patient safety processes for infection prevention without slowing them down. The LCD screen is finished with a splash-proof seal and the entire system is easily wiped off to enable disinfection. Weighing in at approximately 3 lbs., the C5 is made for mobile care.

For example, McKesson's Horizon Admin-Rx™ solution – the nation's leading bar-code technology at the point of care (BPOC) solution with more than 140 implementations and more than 700,000 medication errors prevented each week – is easily accessed on the C5. The C5 helps clinicians confidently enforce the five rights of medication administration with Horizon Admin-Rx: right drug, right patient, right dosage, right time and right route.

Creating Solutions that Work

McKesson's Technology Services Group has created bundled offerings based upon best practices from Motion Computing, as well as its own testing and validation processes. Bundles include the C5

"In our initial pilot of McKesson's clinical documentation and bar-code medication administration solutions with the C5, we saw an 18% improvement in patient vital sign charting accuracy along with a significant reduction in charting delays."

device, docking station, key component spares, add-on software, as well as McKesson's staging, maintenance and project coordination services. Delivering these devices as bundled solutions provides maximum flexibility with an extensive set of features, as well as ensuring the timely delivery of fully functional solutions.

Mobility Service

McKesson strongly recommends that the customer purchase a wireless assessment with any order. Wireless assessments are necessary to determine minimum throughput requirements, coverage capabilities, packet throughput capabilities and

potential interference. McKesson and Motion Computing have strong wireless recommendations for minimum coverage and signal strength for maximum performance, and this assessment will help determine readiness.

Power of McKesson

Significant engineering resources have gone into the C5 validation process. Therefore, customers that procure their C5 devices exclusively through McKesson will receive comprehensive application support, including expert services and a customized scan engine at the lowest total cost of ownership.

For More Information

For more information on the Motion C5 Mobile Clinical Assistant and a current list of validated applications, contact your McKesson client executive, call 800-981-8601 or e-mail us at TETechDesk@McKesson.com.
