

IT ASSET MANAGEMENT, DATA PROTECTION AND THEFT RECOVERY

Computer security is not an option – it's a necessity. Now, more than ever, organizations must accurately track and protect their computers, and prevent sensitive data from falling into the wrong hands.

Computrace® technology, when combined with Intel® Anti-Theft (AT) capabilities, provides Absolute® customers with the best possible means to protect their computers, secure their data, and minimize the financial, legal and regulatory risks of lost or stolen machines.

A Powerful Set of Options

With Computrace, you can easily identify computers that have gone missing or receive alerts so you can proactively investigate suspicious behavior. If security measures are desired, instructions can be sent from the Absolute Customer Center.

Intel AT provides an added layer of security to computers already protected by Computrace, allowing you to remotely disable a machine and render it virtually useless to unauthorized users.

Together, these solutions provide a powerful set of options when responding to loss, theft or suspicious circumstance, and offer an enhanced level of protection even when the hard disk is encrypted, the PC is off, or the operating system is down.

Intel AT

Automatic Disable

- Intelligently disable computers that fail to check in to the Absolute Monitoring Center within a pre-defined time period.
- Secure assets and data even if theft is not immediately recognized

Send a "poison pill"

- Remotely lock down a compromised notebook and prevent the OS from booting. Use real-time technology to invoke the Intel AT lock almost immediately.¹
- Disable regardless of physical location, internet connection, or if device is turned on

A computer that is locked with Intel AT technology can be easily reactivated once security is reestablished.

Unmatched Protection

If your computers are Intel AT enabled and you've activated our Computrace® Agent, your computers are now protected with the most reliable and tamper-resistant combination of technologies available today. For a complete list of computers that support Intel Anti-Theft Technology, visit: www.absolute.com/resources/public/Other/Abt-Intel-Info-E.pdf

IT ASSET MANAGEMENT, DATA PROTECTION AND THEFT RECOVERY

IT Asset Management

Manage computers and smartphones (regardless if a device is on or off the company network). Monitor changes in asset information including user identification, physical location, and the installation of software/hardware that may not comply with company regulations.

Data & Device Security

Remotely delete sensitive data on missing computers and produce an audit log of the deleted files to prove compliance with government and corporate regulations. Use the Device Freeze feature to freeze a computer. Once frozen, display a custom message to the user encouraging them to comply with specific requests for action (return for servicing, validate user identity, etc.).

Geotechnology

Use GPS or Wi-Fi technology to track your assets on an internet map. You will be able to see current and historical locations within about 33 feet. Computrace products that include Geofencing allow you to build pre-defined areas (geofences) and apply rules with alerts if a condition occurs – for instance if a device remains outside a boundary beyond a set measure of time. If the physical location of a device contravenes the rule, you will be alerted so you can investigate and determine if further action is required.

Theft Recovery

At our customer's request, the Absolute Theft Recovery team will forensically mine a stolen computer over the internet using a variety of procedures including key captures, registry and file scanning, geolocation, and other investigative techniques to determine who has the computer and what they're doing with it. Most importantly, we will use our technology to pinpoint the physical location of the computer and work closely with local law enforcement to recover it.

Service Guarantee

Our corporate customers may be eligible to receive up to \$1,000 if we are unable to recover a computer or perform the data delete service.

Computrace[®]

BY **Absolute**[®]Software

"Computrace immediately gave us visibility into our laptop population. We can see where the laptop is, who is logging in and what software is installed. It also allows us to verify that the laptop's encryption is up to our standard – which is key for regulatory compliance. It has taken us from 30% IT asset auditing capability to well over 95% on computers that are outside our facilities."
